

Environmental, Energy and Occupational Safety Policy of the Schunk Companies in Heuchelheim and Schunk Kohlenstofftechnik GmbH in Wetttemberg Germany

We, the Schunk Companies in Heuchelheim (Schunk GmbH, Schunk Carbon Processing GmbH, Schunk Dienstleistungsgesellschaft mbH, Schunk Kohlenstofftechnik GmbH and Schunk Sintermetalltechnik GmbH), as well as Schunk Kohlenstofftechnik GmbH in Wetttemberg consider environmental protection, energy efficiency and occupational safety as a permanent task and an inherent part of our business. Besides a high quality of work and business success, environmental protection, energy efficiency, occupational safety and health protection belong to our main corporate tasks. With the implementation of this policy, we want to ensure a sustainable use of all resources.

Environmental protection today leads us away from mere treatment towards a more integrated approach. For us this includes the improvement of energy efficiency with the responsibility to sustain human livelihood and to preserve nature as well as to reduce the impact on humans and nature as far as possible when manufacturing, storing, transporting, selling and applying our products.

We ask our suppliers and external companies working on our company premises to observe the same environmental standards as we do.

When introducing new operations, new products, new technical equipment or processes, the impact on the environment and energy consumption is evaluated in advance. In doing so, the compliance with environmental regulatory or other requirements is a matter of course for us.

We are committed to continuously improving our environmental and energy management system as well as our environmental performance and energy efficiency by systematic monitoring. Our environmental and energy management system helps to reduce entrepreneurial risks and to take advantage of opportunities.

Applied environmental protection in all areas is a sign of high product quality. It secures our future by careful use of available resources, reduction of waste, energy consumption and environmentally unfriendly emissions, and prevention from runaway emissions during equipment malfunction.

Continuous improvement of occupational safety and health care based on both our own expertise and permanent scientific progress is our commitment.

An open and objective dialogue is the basis for mutual trust with citizens and authorities. We involve our employees by regular information and training, thus leading to ecology-minded thinking and acting and achieving our objectives.
